About Me

Researcher in machine learning, specialising in deep learning, vision, and speech. My broad aim is to advance responsible AI research, enhancing trustworthiness and safety, with a particular focus on fairness, inclusion, explainability, and societal impact.

Education

Indian Institute of Science Education and Research, Bhopal

July 2019 - July 2024

BS-MS in *Electrical Engineering and Computer Science* | CPI : 8.36/10

- Minor: Data Science and Engineering
- Relevant Courses: Computer Vision, Deep Learning, Intelligent Robotics, Machine Learning, Natural Language Processing, Network Science

Experience

Centre for Responsible AI (CeRAI), IIT Madras

Aug 2024 - Current

Post-Baccalaureate Fellow | Supervisor: *Prof. Balaraman Ravindran*

- Leading the research on grounding artefacts of audio deepfakes into linguistic and acoustic features, speech and non-speech, phonetics, phonology, morphology, syntax, and semantics to develop an explainable detection model by design, tailored to the Indian context. Preliminary research submitted to Audio-AAAI'26 Workshop. More detailed version under submission at Web4Good track@TheWebConf'26.
- At the initial discussion stage of the project on multi-agent systems for multimodal deepfake detection, in tandem with the RAG framework to provide additional support through fact-checking. The [project](#) is one of the five selected proposals for a grant by IndiaAI Mission from 400 submissions.
- Chapter author of the "Grounding Responsible AI in Agriculture", a project in collaboration with Meta OpenLoop. The work explores current applications and associated risks of AI in agriculture, identifies key gaps in its development and deployment, and examines relevant policies, regulations, and legal frameworks. The paper emphasises the importance of responsible AI through actionable technical and policy recommendations, grounded in expert interviews and comprehensive analysis research.

Image Analysis and Biometrics Lab, Department of CSE, IIT Jodhpur

May 2023 - July 2024

External Master's Thesis | Supervisor: *Prof. Mayank Vatsa & Prof. Richa Singh*

- Created and curated a large (approx 1.3M samples), diverse (26 generation techniques across 4 sets of real-fake and audio-video), balanced (wrt sex and skin-tone) benchmark multimodal deepfake dataset comprising identity-aware swaps and synthetic media.
- Performed qualitative experiments such as BRISQUE score for visual quality and FAD for audio quality. And benchmarked using 12 existing state-of-the-art unimodal (visual and audio) and multimodal deepfake detection models.

Publications

Conference [ILLUSION: Unveiling Truth with a Comprehensive Multi-Modal, Multi-Lingual Deepfake Dataset](#)
Kartik Thakral*, Rishabh Ranjan*, **Akanksha Singh**, Akshat Jain, Mayank Vatsa, Richa Singh
International Conference on Learning Representations (ICLR) 2025
* = equal contribution

Skills

Languages Python, C/C++
Frameworks PyTorch, HuggingFace, Dockers, L^AT_EX, Git, Bash, Slurm

Achievements

2024 Women Post Baccalaureate Fellow, Research Fellowship, CeRAI, IIT Madras
2023 Qualified for Assistant Professor, Subject: CSA, UCG-NET

Presentations

Poster Explainable Audio Deepfake Detection, Conclave on AI Governance, CeRAI IIT Madras
Presentation Explainable Multilingual Audio Deepfake Detection, WSAI Bi-weekly, WSAI IIT Madras
Poster ILLUSION, ICLR 2025
Presentation Deepfakes & ILLUSION, Group Weekly, IIT Madras

Academic Projects

Interpretable Deep Learning for Text Classification

- Implemented an existing novel interpretability framework for text CNNs from scratch to linguistically motivated features. The proposed features are borrowed from existing work on text classification of shorter texts between fiction and non-fiction genres (Brown Corpus).
- The exit criteria are to corroborate our interpretability results with the baseline results obtained from the existing work using logistic regression.

Consumer Complaints: Text Classification Problem

- Used machine learning and deep learning models for a multi-class nominal label classification.
- A vectorisation and feature selection pipeline was used for statistical architecture, and hyperparameters were fed to a cross-validation grid search on 5 supervised learning models. Logistic regression gave the best results, accuracy of 85.9%.
- For DL architecture, FFN, bi-directional LSTM, RNN, and transformers were used. Bi-directional LSTM gave the best results, with an accuracy of 86.5%.

Teaching Experience

ECS308: Data Science and Machine Learning

Jan 2023 - April 2023

Undergraduate Teaching Assistant

- Course Instructor: Dr. Tanmay Basu. One of the two TAs for the course with 50 students.
- Conducted labs on supervised and unsupervised machine learning and hyperparameter tuning.
- Graded assignments, course projects, quizzes and examinations.

Personal Interests

	Served as the first female Secretary for the Sports Society. Participated in the Inter IISER
<i>Sports</i>	Sports Meet in the sports basketball, football, and athletics, and won Silver (2019) and Gold (2022 and 2023) in Basketball. Served as Basketball Coordinator.
<i>Trekking</i>	Completed high-altitude (upto 15000ft) treks.
<i>Quiz</i>	Served as the Publicity and PR Coordinator for the IBQC-Quizzing Society.
<i>Volunteer</i>	Volunteered as a Peer (Student) Counsellor to the Institute Counselling Cell.
<i>Dance</i>	Served as the Committee Member of the Mayuraa-Dance Society.
<i>Arts</i>	Served as the Vice-Secretary of the FALC-Fine Arts and Literary Society.
